**COKE AND PEPSI FANS BEWARE!**

Before you drink another Coke or Pepsi, think about this:

- In many states the highway patrol carries two gallons of Coke or Pepsi in the trunk to remove blood from the highway after a car accident.
- You can put a T-bone steak in a bowl of Coke or Pepsi and it will be gone in two days.
- To clean a toilet, pour a can of Coke or Pepsi into the bowl. Let it sit for one hour, then flush clean.
- The citric acid in Coke and Pepsi will remove stains from vitreous china.
- To remove rust spots from chrome car bumpers, rub the bumper with a crumpled piece of aluminum foil dipped in Coke or Pepsi.
- To clean corrosion from car battery terminals, pour a can of Coke or Pepsi over the terminals to bubble away the corrosion.
- To loosen a rusted bolt, apply a cloth soaked in Coke or Pepsi for several minutes.
- To remove grease from clothes, empty a can of Coke or Pepsi into a load of greasy clothes, add detergent, and run through a regular cycle. The Coke and Pepsi will help loosen the grease stains.
- Coke and Pepsi will clean road haze from your car windshield.
- The active ingredient in Coke and Pepsi is phosphoric acid. Phosphoric acid has a pH of 2.8. It will dissolve a nail in about 4 days.
- To carry Coke or Pepsi syrup concentrate in a commercial truck, the truck must use the **Hazardous Material** place cards reserved for highly corrosive materials.
- The distributors of Coke and Pepsi have been using their product to clean the engines of their trucks for about 20 years.

You get one stomach in your lifetime. Treat it kindly!
