Harsh Realities!

By Hesh Goldstein

The good ‘ol U S of A. The best! The richest! The most powerful! The most diseased! Scary, isn’t it, that the most influential nation in the world leads the world in arthritis, cancer, constipation, diabetes, gout, heart disease, high blood pressure, high cholesterol, impotency and obesity, just to name a few? Did you ever wonder why? Did you ever wonder why our doctors continually treat symptoms and never cure but only “control”? Think about this: most research done in medical schools and virtually all the curriculum is funded (a euphemism for controlled) by the pharmaceutical industry. And since the sole purpose of the drug companies is to make money, they turn good, idealistic people, with the best intentions, into prostitutes for them. Drugs for this and drugs for that along with surgeries for this and surgeries for that make the pharmaceutical/medical/HMO alliance the biggest money makers in the world.

So, a person graduates from medical school where they learn what the drug companies want them to learn and then they go into “practice”. They are continually wooed by the drug companies so they don’t lose the “take a pill” mentality. Meanwhile, the people get sicker and sicker and fatter and fatter and never get well. They go to their doctor for routine checkups to make sure that their illness is “under control”, and spend thousands in their lifetime treating a symptom while never getting to the cause.

If you were a doctor and you knew that you were always treating symptoms, wouldn’t there even be the slightest curiosity on your part to learn about what might cure your patient? No! And why is that? Because “patient” is a sophisticated word for customer! And we all know that the key to a successful business is repeat customers. What a “catch-22”. Can’t cure em cause we’ll lose em.

As you read this and reflect upon your own health situation, are you not curious to learn about what will make you well and free you from the burden of prescription drugs and their side effects? If so, why haven’t you attempted to find out for yourself?

Please allow me to give you some information that could change your life, improve your health, and save you money. The underlying cause of 95% of all illness comes from the SAD. The Standard American Diet. It is a diet filled with fat, rancid oils, and enormous quantities of sugar. It is a diet that will and does put you in an early grave. The fat, in the diet, is saturated fat. It is a fat that hardens at room temperature and in your arteries. Saturated fat is found in anything that walks, runs, flies, crawls or swims, dairy products and eggs.

Switching from a flesh and blood diet to a plant based diet will lower your blood pressure and cholesterol, will remove plaque and clear your arteries, get rid of constipation, and will add new meaning to your sex life. All within 30 days, guaranteed! Fiberless foods like white flour products and white rice do nothing but add empty calories to your body and keep all the junk inside of it because it binds and clogs rather than act like “Rooter Rooter” and clean you out. The real ”Rooter Rooter” comes in the form of whole grains like brown rice, oatmeal, millet, buckwheat, quinoa, bulgar, whole wheat flour breads, etc.

Understand something. The nature of a dead body is to rot. Whether inside or outside of your body it still rots. If it’s in your body, that rotting, putrefied, decomposing matter stays there and fills your body with poison. Flesh

foods (meat, chicken, fish, pork, turkey, etc.), because of their diseases are pumped full of antibiotics. In fact, 80% of the antibiotics produced are fed to “food animals” to attempt to control their diseases which are passed on to you.

The chickens are the worse. Did you ever wonder why you are advised to cook chicken with a flame thrower and to boil all surfaces that the dead chicken has come into contact with? It is because that chickens, due to the way they are raised, are covered with doo doo, and our dear friends at the U.S. Dept. of Agriculture say that it's ok to sell doo doo covered chicken as long as the doo doo can't be seen through the clear wrap. You see, the government constantly protects the interests of the businesses that make the large campaign contributions, not the people.

Another interesting fact about the “food animals” is that their diets are anything but good. Yes, they are fed grains, but those grains, in order to save on grain costs, include the ground up remains of the dead, dying, diseased, and decaying animals that cannot be processed for “food”, road kill, blood, and the feathers from the birds. Yuuuuuuuuuuummy

What about fish? The government is now saying that fish should not be eaten more than twice a month due to the high mercury contamination which has been linked to Alzheimer's disease and scores of other neurological disorders. The same mercury that is in your fillings and which the dentists have been in denial about for years.

Then where do I get my protein? From the same place that the animals and fish do – the plants, the grains, and the sea vegetables. If you go to the same source as the creatures, you will get protein without saturated fat and all the diseases that come from eating higher up on the food chain.

Did you know that a 7-11 “Big Gulp” contains 46 teaspoons of sugar and that a 20 oz bottle of soda contains 18 teaspoons of sugar? “Look ma, no teeth”! These quantities of sugar would be higher if the sugar would remain suspended in the liquid and not settle to the bottom of the container. But alas, these, unfortunately for the sugar industry, are the cut-off points.

Why doesn't anyone ever tell you about these truths? Because money comes before anything else and enough is never enough!

Your lives and well being are in your hands. At least now you are in a better position to be able to make a choice. We all have free will. If you are content with treating your symptoms, go see your doctor. If, however, you want to cure your illnesses, change your diet.

The choice is yours.

Aloha!
